

# DigestPlus

**DigestPlus is an enzymatic nutritional aid for expedient digestion of the foods we eat.**

**DigestPlus aids in the efficient release of nutrients (vitamins, minerals and phytonutrients) for rapid uptake by the bloodstream.**

**DigestPlus** is a powerful combination of pharmaceutical grade “**Live Plant Enzymes**” scientifically formulated to support your digestive process. It is estimated that over 40% of Americans experience uncomfortable digestive symptoms each month. DigestPlus contains 7 different live plant enzymes. Each enzyme plays a specific role in helping your digestive system efficiently breakdown proteins, carbohydrates, fats and fibers. In other words, these enzymes turn the foods we eat into energy and unlock this energy for use by the body. DigestPlus is an excellent dietary aid for many digestive problems (see highlighted box below).

In addition, the enzymes in DigestPlus help replace the naturally occurring enzymes lost in food processing, preparation and cooking.

DigestPlus has been specifically formulated to meet the needs of the current American diet which includes fats, proteins, hidden sugars, dairy, snack foods, and processed foods. Experts call this a “high stress diet”. Results of a high stress diet may include:

- \*Lack of energy
- \*Indigestion, gas, bloating
- \*Frequent illness from poorly functioning immune system
- \*Poor elimination (constipation or frequent, loose stool)
- \*Hormonal imbalance
- \*Dry or oily skin
- \*Weight control issues (over or underweight)

As we age, our body’s ability to produce digestive enzymes is compromised, DigestPlus helps to lessen this burden and improve the efficiency of your entire digestive system. The enzymes in DigestPlus remain active in your digestive system until all their enzyme activity levels have been used.

## DigestPlus can be used for any of the following:

Most digestive disorders	Intestinal toxemia
Dairy intolerance	Food allergies
Gallbladder stress (see below)	Indigestion
Prevention of malabsorption	Sugar Intolerance

Gallbladder stress may show itself with these indications: Nausea following meal anywhere from directly after to several hours later; Headache prior to or following meal; Diarrhea following meals or thereafter; Pain or tenderness in upper abdomen; Diarrhea to constipation; Burps or belches; Bloating; A feeling of bloating or tenderness where the rib cage comes together.

**Suggested Use:** Take 2-3 capsules with every meal or 1-2 capsules with snacks. The dosage is dependent on the types of foods eaten and the individual’s difficulty of digestion. If alcohol is consumed, increase the dosage. DigestPlus can be pulled apart and added to food or beverages.

## Two Capsules Provide

PROTEASE	72,000	HUT
AMYLASE	11,000	DU
LIPASE	290	FCCLU
CELLULASE	1200	CU
LACTASE	720	LacU
INVERTASE	.32	IAU
MALT DISTASE	432	DP
ENZYME BLEND	371	MG

## Enzyme Breakdown Chart

PROTEASE - Breaks down proteins
AMYLASE - Breaks down carbohydrates
LIPASE - Breaks down fats
CELLULASE - Breaks down fibers
LACTASE - Breaks down lactose
INVERTASE - Breaks down sugars
MALT DISTASE - Breaks down sugars

## FOR MAXIMUM ENZYME SUPPORT USE IN CONJUNCTION WITH PROTEZYME

*“In my opinion, the ability to make these live plant enzymes available to us is one of the most significant and beneficial advances of the twentieth century. If there is a substance that could rightly be called the fountain of youth, this is it.”*
